

## The Web Server for the IDS HIGH-LEIT SCADA System

### New Insights for Process Control

Whenever information has to be made available to a large group of persons, web-based solutions are first choice. Whether it's reportings, Excel files, logs, graphs or images: the new web server for the HIGH-LEIT SCADA system now provides staff outside of grid operation with all the required information – easy and user-friendly, and without any risk to current grid operations.

#### Safety first

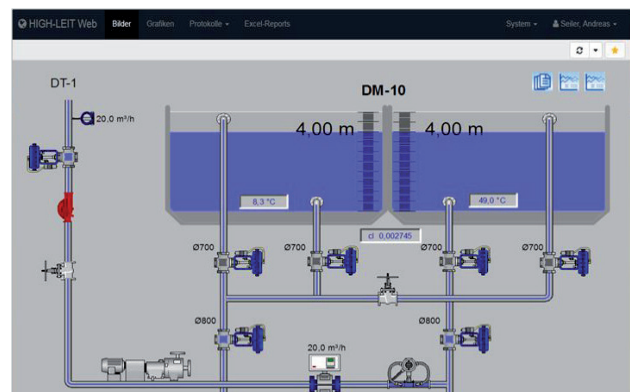

A secure connection via HTTPS in a standard web browser enables staff who are not directly involved in grid operation to access data for which they have been authorized. However, the web server does not permit switching operations. This makes it suitable e.g. for being used by the controlling department or by partner companies.

#### Clear-Cut and User-Friendly

For easy and user-friendly access to the system, the web server features a „Favourites“ page where users can intuitively obtain all the required information. A re-parameterization of data is not required..

The Rights and Role concept makes user administration as easy as can be for Admins. It only takes a few steps to permit individual users or groups of users to view images and graphs, Excel reports or logs that were parameterized in the HIGH-LEIT SCADA system.

Another benefit of the web server is that it enables users to securely retrieve all the required data via smartphone.
